<b>Project Title:</b>	Integrated elderly care in China
<b>Abstract:</b>	<p>China – along with the rest of the world – faces a number of demographic challenges that if not adequately addressed will have a significant and detrimental effect on its population. Social, demographic and epidemiological changes have dramatically changed the demand for health services in China. Population ageing and the increase in chronic diseases present a great challenge, especially with scarce health care resources that are often deployed in a fragmented manner, in which for instance public health, primary care, and secondary care, are not well coordinated. Moreover, families and social networks of patients are gaining center attention in the provision of care and support to overcome the lack of coordinated care services for older persons. The fragmented nature of health systems and the strong dependence on informal care is increasingly viewed as problematic, because of increasing numbers of empty-nest older people and because of informal caregivers aging themselves. At present, Chinese elderly care is almost entirely based in informal and community care, and institutional services are scarce, and fragmented. The problematic nature of elderly care in China is even greater due to differences in geography, climate, economic development, cultures, and governance. This variety makes the task of improving and integrating health services for older people in China particularly difficult, and an important challenge for research and policy.</p> <p>High quality health services and social support systems for older persons, which are well aligned with primary care, can form more effective and less costly systems than systems in which services are fragmented. Such developments are further supported by technological advances, which enable patient information to be shared. Integrated care as a discipline has gained much importance in recent years in improving elderly care in Western societies. The multiple and often complex needs of aging populations require approaches that extend beyond traditional acute episodic health care and the services of any single organization; they require instead innovative partnerships between health and social care and informal care. Translating these insights to the Chinese context to better address the changing demand for integrated elderly care in China is</p>

	<p>the main aim for the proposed study.</p> <p>More specifically, this research will describe and explain how innovative integrated elderly care projects in China can contribute to (i) continuous, coordinated care and social support for older people, (ii) improve older people's health and well-being outcomes, and (iii) translate and redesign the mainly "Western" models and theories on integrated elderly care to fit the specific Chinese contexts. We will employ a mixed-methods research design, i.e., one that combines quantitative and qualitative methods to open the black box of integrated elderly care in China, preferably using multiple case studies.</p> <p>Erasmus School of Health Policy &amp; Management (ESHPM), at Erasmus University Rotterdam, plays a leading role in national and international research and education on elderly care, integrated care and healthcare management. For several years ESHPM is already providing education for Chinese health care managers and PhD-students. Given the match between ESHPM's expertise and core tasks of the Health Human Resources Development Center of the Ministry of Health of The People's Republic of China (HHRDC), namely education, training, international cooperation and health research, both parties have signed a Memorandum of Understanding to further successful collaboration. Building on our earlier work in and with China, the proposed PhD-project is expected to make an important contribution to integrated elderly care in China.</p>
<p><b>Requirements of candidate:</b></p>	<p>Background: We are looking for excellent graduates who aspire to do a PhD research at Erasmus School of Health Policy &amp; Management at Erasmus University Rotterdam. We are searching for PhD-students with expertise and an interest in improving the management and organization of healthcare through integrated care arrangements. You will be part of our research staff and combine your theoretical and practical knowledge with empirical work in China. A Master in management, organizational sciences or sociology is a pre-requisite as well as excellent writing skills in English, and verbal mastering of the English language.</p> <p>Master's degree: Yes</p> <p>EUR requirement:</p> <p>IELTS: 7.5 (min. 6.0 for all subs.)</p> <p>TOEFL: 100</p>

	<p>(min. 20 for all subs.)</p> <p>Cambridge Proficiency: C2</p>
