## A European Green Deal

Striving to be the first climate-neutral continent

Climate change and environmental degradation challenges, the European Green Deal will ensure:

- no net emissions of greenhouse gases by 2050
- economic growth decoupled from resource use
- no person and no place left behind

The European Green Deal is also our lifeline out of the economic crisis from the NextGenerationEU Recovery Plan, and

First Digital Twins:

- Climate Extremes
- Climate Adaptation

Core infrastructure by ESA, EUMETSAT & ECMWF

Digital Twin Earth - DestinE

**Objective:** An interactive and highly reliable knowledge generation system to support decision-making and generate insights, to enhance our ability to anticipate environmental disasters and their resultant **socio-economic** crises for a sustainable future

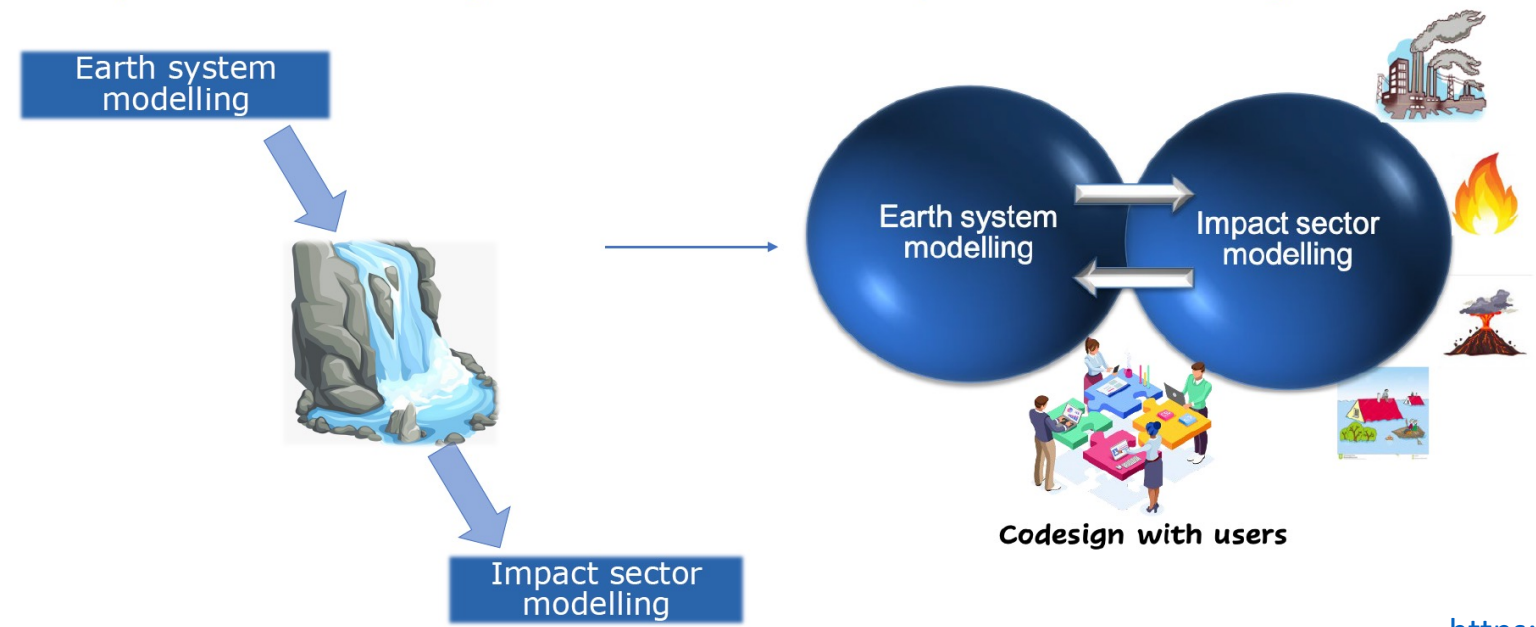

To support tackling complex environmental challenges, **DestinE will help policy-makers to:**

- **monitor and simulate the Earth's system developments (land, marine, atmosphere, biosphere) and human interventions;**
- **anticipate environmental disasters and resultant socio-economic crises to save lives and avoid large economic downturns;**
- **enable the development and testing of scenarios for ever more sustainable development.**

HOME / SERVICES

## Our services: reach higher and dig deeper with satellite data

Our free public viewer provides access to a wealth of satellite data in various layers. We also offer additional services. This allows you to get started with the data and to easily integrate it into your familiar software. Opt for:

- **Web services** – protocols for downloading images and integrating them into GIS software
- **Notebooks** – programming environment to quickly access and edit data
- **Virtual Machines** – external computer used to view data and process it in the cloud
- **Data access** – direct access to satellite data

We offer more than just CPUs and RAM  
We connect EO data with knowledge and processing power

## EODC CLOUD

### WHAT WE OFFER

#### DATA REPOSITORY

We are experts in Earth Observation data provision and distribution, procurement, as well as management and processing.

In our EO Data Repository, our partners and customers get access to our global Copernicus Sentinel Long Term Archive and data from other satellite missions.

Learn more >

#### EO & IT SERVICES

Our solution connects our cloud computing platform with one of Europe's most powerful processing engines and our Petabyte scaled EO Data Repository.

Through dedicated EODC services, our partners and customers are able to access Teraflops of computational power.

Learn more >

#### COOPERATION

In our international cooperation network we connect the strongest players from science and application.

Together with our partners we offer a wide range of added value tools, services and interfaces to our EO Data Repository and Infrastructure components.

## Registry of Open Data on AWS

### About

This registry exists to help people discover and share datasets that are available via AWS resources. Learn more about sharing data on AWS.

See all usage examples for datasets listed in this registry.

See datasets from [Allen Institute for Artificial Intelligence \(AI2\)](#), [Digital Earth Africa](#), [Facebook Data for Good](#), [NASA Space Act Agreement](#), [NIH STRIDES](#), [NOAA Big Data Program](#), [Space Telescope Science Institute](#), and [Amazon Sustainability Data Initiative](#).

### Search datasets (currently 5 matching datasets)

### Add to this registry

If you want to add a dataset or example of how to use a dataset to this registry, please follow the instructions on the [Registry of Open Data on AWS GitHub repository](#).

Unless specifically stated in the applicable dataset documentation, datasets available through the Registry of Open Data on AWS are not provided and maintained by AWS. Datasets are provided and maintained by a variety of third parties under a variety of licenses. Please check dataset licenses and related documentation to determine if a dataset may be used for your application.

### Digital Earth Africa Sentinel-2 Level-2A

[agriculture](#) [africa](#) [disaster response](#) [earth observation](#) [geospatial](#) [natural resource](#) [satellite imagery](#) [sustainability](#)

The Sentinel-2 mission is part of the European Union Copernicus programme for Earth observations. Sentinel-2 consists of twin satellites, Sentinel-2A (launched 23 June 2015) and Sentinel-2B (launched 7 March 2017). The two satellites have the same orbit, but 180° apart for optimal coverage and data delivery. Their combined data is used in the Digital Earth Africa Sentinel-2 product. Together, they cover all Earth's land surfaces, large islands, inland and coastal waters every 3-5 days. Sentinel-2 data is tiered by level of pre-processing. Level-0, Level-1A and Level-1B data contain raw data fr...

### Sentinel-3

[earth observation](#) [environmental](#) [geospatial](#) [land](#) [oceans](#) [satellite imagery](#) [sustainability](#)

This data set consists of observations from the Sentinel-3 satellite of the European Commission's Copernicus Earth Observation Programme. Sentinel-3 is a polar orbiting satellite that completes 14 orbits of the Earth a day. It carries the Ocean and Land Colour Instrument (OLCI) for medium resolution marine and terrestrial optical measurements, the Sea and Land Surface Temperature Radiometer (SLSTR), the SAR Radar Altimeter (SRAL), the MicroWave Radiometer (MWR) and the Precise Orbit Determination (POD) instruments. The satellite was launched in 2016 and entered routine operational phase in 20...

### Sentinel-5P Level 2

[air quality](#) [atmosphere](#) [earth observation](#) [environmental](#) [geospatial](#) [satellite imagery](#) [sustainability](#)

This data set consists of observations from the Sentinel-5 Precursor (Sentinel-5P) satellite of the European Commission's Copernicus Earth Observation Programme. Sentinel-5P is a polar orbiting satellite that completes 14 orbits of the Earth a day. It carries the mesospheric...

## A Planetary Computer for a Sustainable Future

### Supporting sustainability decision-making with the power of the cloud

The Planetary Computer combines a multi-terabyte catalog of global environmental data with intuitive APIs, a flexible scientific environment that allows users to answer global questions about that data, and applications that put those answers in the hands of conservation stakeholders.

**Data Catalog**  
The Planetary Computer includes publications of environmental monitoring data, to construct, analyze, ready, format, accessible through our APIs as well as directly available via Azure Storage.

**API**  
The Planetary Computer API is designed easy for users to find exactly the data they need, simplifying search and discovery across our Data Catalog.

**Hub**  
The Planetary Computer Hub is a development environment that makes our APIs and APIs accessible through familiar, open source tools, and allows users to easily scale their analyses.

**Applications**  
Partners all over the world are building on top of the Planetary Computer platform, providing the schedule information that is critical to sustainability practitioners.

# The DestinE Data Infrastructure challenges:

- Federation !
- Multidomain, beyond Earth Sciences
- Integration of existing data platforms
- Integration of (national) research initiatives
- Quality and traceability of data within the DT ecosystem
- Reach the various users including policy makers
